SSW
SUPERIOR SOFTWARE for WINDOWS

Case Study

SSW has been working with the Commonwealth Bank over the last year on two core .NET development projects, **CommTrack** and **MIS Toolbox**.

CommonwealthBank

CommTrack is a timesheet application that allows managers to report on and measure business performance. Initially rolled out to 1,000 users, its success has seen that figure jump to 19,000, with the potential for up to 30,000 users over the next two years.

MIS Toolbox is closely tied into CommTrack. It manages the complex hierarchy of business activities the users are able to select while they're setting up their profile.

"…The app is getting very good reviews from the user base and we have a queue of people lined up nationally wanting to get on and use it…."
